Simply Better by Degrees

FPF-7 Refrigeration System

17200 Btu's/hr - 5.04kw @ 0 Degrees

Crisp-Air model FPF-7 units are suitable for insulated bodies up to and including 6 meters in length

Capacities:

Maximum capacity rated at 37 Degrees C
Compressor speed 2400r.p.m.

| <u>Return Air</u> | <u>Watts</u> | <u>Btu's/hr</u> |
|-------------------|--------------|-----------------|
| 0 Deg C | 5040 | 17200 |
| -18 Deg C | 2400 | 8189 |

Refrigerant: Environmentally friendly R134a for Chiller systems - Nil ozone depleting potential. R404 for Freezer.

Compressor: Sanden 7 cylinder, swash plate design, belt driven from either an "A" or "B" section electro magnetic clutch assembly.

Modular Design with separate Evaporator and Condenser assemblies for ease of installation and maximum body strength.

Cubed Evaporator for minimum loss of load space. Evaporator case constructed from stainless steel.

Condenser case constructed from zinc anneal sheet over a welded angle iron frame, electro statically powder coated in gloss white for excellent durability.

Coils Constructed from copper tubes, aluminium fins and galvanized steel end plates.

Airflow for evaporator and condenser is by fully sealed, permanent magnet motors in 12 or 24 volts DC

Electric Standby is available in 240v single phase 50Hz, with a remote receptacle. The unit is fully inspected, tested and tagged to Qld government specifications. A 10 meter extension lead (certified) is included with a complete kit.

Controls consist of an in cab mounted electric module, giving both digital temperature control and readout of body temperature, safety cut out devices for system protection and fully automatic hot gas defrost with manual override are standard features.

Warranty: Full 12 month 60,000km (Whichever occurs first.) on parts & labour only, installation is covered by the service agent fitting the equipment. Warranty will only be considered if the Crisp-Air equipment service schedule is kept up to date and the registration agreement is fulfilled.
